

PURE HEALTH RESIN - EPOXY SYSTEMS

Self-levelling or multi-layer epoxy systems are industrial flooring systems with a high level of chemical resistance, impermeable to both oils and aggressive substances. They are resistant to repeated washing and the wear and tear caused by trolleys and moving vehicles, and have a marked anti-skid action and attractive appearance.

Titanium dioxide has been added to the Pure Health resins. It is an exceptional molecule that, thanks to the action of light, is able to eliminate more than 99% of the viruses, bacteria and mould present in the environment in which the resins are used, without the need of human intervention. The highly effective virucidal, fungicidal and bactericidal action makes Pure Health resins ideal for multiple uses.

Pure Health Resin offers a wide range of features and options to suit all needs:

- Self-levelling, anti-skid, multilayer epoxy system.
- Thickness between 0.8 mm and 1.2 mm up to 4 mm.
- Resins equipped with a vapour barrier, subjected to medium-light or medium-heavy traffic, where a high level of resistance to chemicals is required.

Pure Health resins have many fields of application: shopping centres, setting up clean rooms, the food industry, hospitals and clinics.

COLOUR CHARTS

COLOR PASTE

Concentrated colour pastes for colouring the neutral bases of the Floor System.

Note: the **Color Paste** colours refer to the RAL colour chart.

RED

ULTRATOP

Self-levelling mortar made from special hydraulic binders with ultra-rapid hardening to construct abrasion-resistant floors with a thickness of between 5 and 40 mm.

Note: the **Ultratop** colours do not refer to any colour charts because, due to the inherent cement nature of the product, there may be some unevenness in the colour tone.
